14/11/2019 · Macworld should slap themselves. Every single item they list is a Trojan. Not a virus. And they are far from the only ones who call anything and everything a virus. Even so-called security experts do. Viruses self replicate. They need no help from the user to move from one device to another, or infect other apps it can see.

One way to share links to networked files - Mac OS X

Reading 100 Things Every Mac User Should Know Macworld Superguides Book 28 ebooks

Hints

Yes, you can. At least, this has worked in all the network environments I've worked in, but those have always been 100% Mac networks. I expect things will get complicated quickly if this isn't the case. I also run static IP addresses on all my servers, further simplifying things.
