Dielectric Polarization - Engineering LibreTexts

26/10/2021 · The electronic polarizability is a microscopic polarization phenomena that occurs in all materials and is one of the main mechanisms that drives dielectric polarization. To explain how the dielectric constant relates to the electronic polarizability of a material, the polarization or P of a material should be determined.

List of semiconductor materials - Wikipedia

Semiconductor materials are nominally small band gap insulators. The defining property of a semiconductor material is that it can be compromised by doping it with impurities that alter its electronic properties in a controllable way. Because of their application in the computer and photovoltaic industry—in devices such as transistors, lasers, and solar cells—the search for ...

Metallic Reflection - Engineering LibreTexts

7/9/2021 · Reflectance and conductivity. The metallic reflectance can be related to the conductivity by the Hagens-Ruben equation (Equation \ref{5}), where ω is the light frequency, ϵ_0 is the vacuum permittivity (8.85×10^{-12} F/m), and σ is the conductivity. In the infrared region (small frequencies), this equation shows that metals with high reflectance also are good conductors.
