Row echelon form - Wikipedia

In linear algebra, a matrix is in echelon form if it has the shape resulting from a Gaussian elimination.. A matrix being in row echelon form means that Gaussian elimination has operated on the rows, and column echelon form means that Gaussian elimination has operated on the columns. In other words, a matrix is in column echelon form if its transpose is in row echelon ...

Diagonalizable matrix - Wikipedia

In linear algebra, a square matrix is called diagonalizable or non-defective if it is similar to a diagonal matrix, i.e., if there exists an invertible matrix and a diagonal matrix such that $A = PDP^{-1}$, or equivalently $D = P^{-1}AP$. (Such P and D are not unique.) For a finite-dimensional vector space, a linear map: T is called diagonalizable if there exists an ordered basis of consisting of eigenvectors of T .
