Elimination Reactions Of Alkyl Halides Quick Review
Notes Book 1 ebooks

Alkyl halides in which the alpha-carbon is a chiral center provide additional information about these nucleophilic substitution reactions. Returning to the examples presented at the beginning of this section, we find that reactions 2, 5 & 6 demonstrate an inversion of configuration when the cyanide nucleophile replaces the bromine.

*The elimination reaction (E1 CB) of a leaving group in ?
of an anionic centre is a well-known reaction in organic
chemistry, and is commonly called ??elimination. The
easy formation of ?, ??ethylenic ketones starting from
??chloroketones is a good illustration. Most often, the
presence of a negative charge is not necessary, a simple
development of negative charge being sufficient to ...*

Notes Book 1 ebooks

31/8/2014 · Reactions carried out in alcohol tend to be elimination reactions, and reactions carried out in water (aqueous) tend to be substitution reactions. If water were used as a solvent in an elimination reaction involving KOH , the equilibrium would be shifted towards the reactants (water reacting with product), so substitution is favored.
