Rare-earth element - Wikipedia

As seen in the chart to the right, rare-earth elements are found on earth at similar concentrations to many common transition metals. The most abundant rare-earth element is cerium, which is actually the 25th most abundant element in Earth's crust, having 68 parts per million (about as common as copper). The exception is the highly unstable and radioactive promethium "rare earth" is quite scarce.

Slashdot: News for nerds, stuff that matters

19/10/2021 · There is nobody of significance in the scientific community who doubts human-caused climate change," said the lead author, Mark Lynas, a visiting fellow at Cornell University. In contrast, the paper cites a 2016 study by the Pew Research Center that found only 27% of US adults believed that "almost all" scientists agreed the climate emergency was caused by human activity.

this version can be very useful guide, and **Six Degrees Mark Lynas** books play an important role in your products. The problem is that once you have gotten your nifty new product, gets a brief glance, maybe a once over, but it often tends to get discarded or lost with the original packaging.
