Exercise 2: Let F be the field of complex numbers. Are the following two systems of linear equations equivalent? If so, express each equation in each system as a linear combination of the equations in the other system. $x_1 - x_2 = 0$ $3x_1 + x_2 = 0$ $2x_1 + x_2 = 0$ $x_1 + x_2 = 0$ Solution: Yes the two systems are equivalent.

Unimodular matrix - Wikipedia

In mathematics, a unimodular matrix M is a square integer matrix having determinant $+1$ or -1 . Equivalently, it is an integer matrix that is invertible over the integers: there is an integer matrix N that is its inverse (these are equivalent under Cramer's rule). Thus every equation $Mx = b$, where M and b both have integer components and M is unimodular, has an integer solution.

Eigenvalue -- from Wolfram MathWorld

14/1/2022 · Eigenvalues are a special set of scalars associated with a linear system of equations (i.e., a matrix equation) that are sometimes also known as characteristic roots, characteristic values (Hoffman and Kunze 1971), proper values, or latent roots (Marcus and Minc 1988, p. 144). The determination of the eigenvalues and eigenvectors of a system is extremely important in ...

Vandermonde Matrix -- from Wolfram MathWorld

17/12/2021 · A Vandermonde matrix is a type of matrix that arises in the polynomial least squares fitting, Lagrange interpolating polynomials (Hoffman and Kunze p. 114), and the reconstruction of a statistical distribution from the distribution's moments (von Mises 1964; Press et al. 1992, p. 83). A Vandermonde matrix of order n is of the form
