## **Comparing Solutions, Suspensions & Colloids: Properties ...**

*Suspensions may scatter light if conditions are right. A colloid is a mixture with intermediate-sized particles. With colloids, the particles are not easily seen, and the particles will not settle ...*

## **Homogeneous Mixtures | Solutions, Suspensions & Colloids ...**

*Colloids are the ones whose particle sizes range from  $2 \times 10^{-9} \text{ m}$  to  $5 \times 10^{-7} \text{ m}$ . Here the particles are small enough that they remain suspended. The intermolecular forces are strong enough to overcome the nature of particles to settle or float, owing to their small sizes.*

## **Suspensions (Chemistry) - Definition, Properties, Examples ...**

*Colloids can be distinguished from solutions using the Tyndall effect. Tyndall effect is defined as the scattering of light (light beam) through a colloidal solution. The particles are termed as colloidal particles and the mixture formed is known as colloidal dispersion.*

## **Chemistry for Kids: Chemical Mixtures**

*Within the categories of homogeneous and heterogeneous mixtures there are more specific types of mixtures including solutions, alloys, suspensions, and colloids. Solutions (homogeneous) A solution is a mixture where one of the substances dissolves in the other. The substance that dissolves is ...*
